

BRANDEN KENNEDY

Full-Stack Software Developer

Eastern NC · Remote / relocation · brandenkenn@gmail.com · dranben.com · github.com/dranben · linkedin.com/in/dranben

SUMMARY

Full-stack developer working in React and TypeScript with serverless backends on Cloudflare. Over the last two years I have designed, built, and shipped six complete apps solo — real auth, real databases, real users — and I use AI tools like the Claude API and coding agents as a core part of how I work. Before software, I spent seven years in customer-facing roles, so I'm comfortable explaining technical things in plain language.

CORE SKILLS

Languages: JavaScript, TypeScript, C#, Python, SQL, HTML, CSS

Frontend: React, Angular, Vite, responsive design, progressive web apps

Backend & Cloud: Node.js, REST APIs, Cloudflare Workers / Pages / D1 / R2 / KV, Google OAuth

AI & ML: Claude API, Model Context Protocol (MCP) servers, LLM coding agents, reinforcement learning (PPO / MaskablePPO)

Tooling: Git, CI/CD, DNS & domain configuration

SELECTED PROJECTS

LifeTracker: AI productivity PWA

React, Vite, TypeScript · Cloudflare Workers, D1 · Claude API

- Built and shipped an installable web app with a React front end, a Cloudflare Workers + D1 backend, and Google sign-in.
- Designed a single "momentum" score that combines health, productivity, and finance data; the Claude API writes a short daily summary of what changed and why.

LifeCodex: self-hosted knowledge base

React 19 · Cloudflare Workers, D1, R2, KV · MCP

- Built a Notion-style workspace whose rich-text editor is written from scratch on the browser's contentEditable — no editor libraries — with unit tests proving documents survive the round trip to Markdown and back.
- Added a remote MCP connector (OAuth 2.1 + PKCE) so Claude can read and edit the workspace; every AI change saves a revision first, so nothing can be quietly destroyed.

Balatro RL Agent: reinforcement learning

Python · MaskablePPO · LuaJIT

- Trained an agent against the real, unmodified game running headless, across 28 parallel workers. Found and fixed a reward bug that took explained variance from -120% to +71%.

Twitch Chat RPG: multiplayer game

JavaScript · Cloudflare Workers, KV

- A multiplayer game played entirely through Twitch chat — players catch, trade, and battle in real time, with game state on Workers and KV. Live on a partner's channel.

World of Aurea: commercial RPG, solo

Godot 4.6 / C# · worldofaurea.com

- Building every part of the game solo — turn-based battle engine, save system, shaders, and all the pixel art — plus the marketing site. Steam page is live.

Also shipped: WallRemind (native Android app + Cloudflare Worker, MCP-triggered) · redline (PySide6 GPU overclock & monitoring suite) · danielbetter.com (freelance React client site, Resend API).

EXPERIENCE

Independent Software Developer

Self-Employed · 2024 to Present

- Design, build, and run the apps above — everything from the database schema to the UI is my own work, deployed through Git-based CI/CD on Cloudflare.
- Use LLM coding agents daily and build product features on the Claude API.

Wireless Consultant

Cellular Sales (Verizon Authorized Retailer), NC · 2019 to 2025

- Spent six years explaining technical products to non-technical customers, and trained new hires on how to do the same.

Customer Consultant

Bell's Appliance, NC · 2025 to 2026

Product Specialist

DW Nissan, NC · 2018 to 2019

EDUCATION

Bethel School of Technology

Technical Certificate, Full-Stack Software Development · 2019 to 2020

- Capstone: a full web application built in Angular (TypeScript).
