

BRANDEN KENNEDY

Full-Stack Software Developer

Eastern NC (US Eastern) · Open to remote or relocation · brandenkenn@gmail.com · dranben.com · github.com/dranben

SUMMARY

Full-stack developer who designs and ships production web apps end to end: responsive React and TypeScript front ends backed by serverless APIs on Cloudflare Workers, D1, and KV. An AI-native developer who uses LLM coding agents and the Claude API as everyday tools, with seven years of customer-facing work translating complex technical ideas into plain language.

CORE SKILLS

Languages: JavaScript, TypeScript, C#, Python, SQL, HTML, CSS

Frontend: React, Angular, Vite, responsive design, component-based UIs, progressive web apps

Backend & Cloud: Node.js, REST APIs, Cloudflare Workers / Pages / D1 / R2 / KV, serverless & distributed systems, Google OAuth

AI & ML: Claude API, Model Context Protocol (MCP) servers, LLM coding agents, reinforcement learning (PPO / MaskablePPO)

Practices & Tooling: Git, CI/CD via Cloudflare Pages, DNS & domain configuration, technical documentation

SELECTED PROJECTS

LifeTracker :AI productivity PWA

React, Vite, TypeScript · Cloudflare Workers, D1 · Claude API

- Shipped a full progressive web app end to end: a React/Vite front end on a serverless Worker and D1 backend, behind Google OAuth.
- Built a momentum scoring system spanning health, productivity, and finances, with the Claude API generating automated daily insights.

LifeCodex :self-hosted knowledge base

React 19 · Cloudflare Workers, D1, R2, KV · MCP

- Built a Notion-style app around a hand-rolled WYSIWYG editor on native contentEditable (zero editor dependencies) with a round-trip-tested Markdown core.
- Exposed the workspace to AI through a remote MCP connector (OAuth 2.1 + PKCE), snapshotting prior state on every AI edit for safe, revertible changes.

Balatro RL Agent :reinforcement learning

Python · MaskablePPO · LuaJIT

- Trained an agent against the real, unmodified game engine across 28 parallel workers; diagnosed and fixed a reward-shaping bug that lifted explained variance from -120% to +71%.

Twitch Chat RPG :multiplayer game

JavaScript · Cloudflare Workers, KV

- Built catch, marketplace, and battle systems on a full serverless backend for live, multiplayer play inside Twitch chat.

World of Aurea :commercial RPG, solo

Godot 4.6 / C# · worldofaurea.com

- Architecting a full game solo: custom turn-based battle engine, save/load, scene management, shaders, and asset pipelines; built the React marketing site on Cloudflare Pages.

Also shipped: WallRemind (native Android app + Cloudflare Worker, MCP-triggered) · redline (PySide6 GPU overclock & monitoring suite) · danielbetter.com (freelance React client site, Resend API).

EXPERIENCE

Independent Software Developer

Self-Employed · 2024 to Present

- Design, build, and ship production web apps end to end: React/TypeScript front ends and serverless backends on Cloudflare Workers and D1, deployed through Git-based CI/CD on Cloudflare Pages.
- Work AI-native, using LLM coding agents and the Claude API as everyday partners for building, debugging, and documentation.

Wireless Consultant

Cellular Sales (Verizon Authorized Retailer), NC · 2019 to 2025

- Communicated complex technical concepts clearly to non-technical customers; trained and onboarded new team members and shared best practices.

Customer Consultant

Bell's Appliance, NC · 2025 to 2026

Product Specialist

DW Nissan, NC · 2018 to 2019

EDUCATION

Bethel School of Technology

Technical Certificate, Full-Stack Software Development · 2019 to 2020

- Capstone: a full web application built in Angular (TypeScript).
